

## From Mother to Baby: Shaping the Pathway to Healthy Growth

Dr. Robin Bernstein

Associate Professor of Anthropology  
University of Colorado, Boulder

### *Day of Revolutionary Speaking*

*Learn what recent research in rural West Africa tells us about the effects of a mother's health and physiology on the development of her baby.*

**BIO:** Robin Bernstein, Ph.D., combines field and laboratory research to understand how nutrition, disease, and environment shape growth patterns in infants and children, across generations and within species. An associate professor of anthropology at the University of Colorado at Boulder, she heads a longitudinal study of rural African infants studying causes of growth failure in low-income countries. She also works with the American Association of Physical Anthropologists to expand opportunity for women.
